

How to assemble your Steelco chair

1. Place the gas lift tube into the hole in the centre of the base so that it fits snugly .
2. Place the gas lift cover – wide end first – down over the top of the gas lift
3. Place the seat on top of the gas lift, with the hole in the metal mechanism fitting over the end of the gas lift.
4. Place the end of the back bar into the box at the back of the chair seat. Pull the back bar cover over the box and the back bar should protrude through. The cutout is for the wheel adjuster
